SDC4LIT

Project Partners

- German Literature Archive Marbach (DLA)
- High Performance Computing Center Stuttgart (HLRS)
- Institute for Literary Studies / Department of Digital Humanities, University of Stuttgart (ILW/DH)
- Institute for Natural Language Processing, University of Stuttgart (IMS)

Mission

The project will build a web platform consisting of one or more repositories and a web application for **collection, preservation, cataloging, research** and **sharing** of digital literary sources and research data. The web platform will provide source material, documented methods and tools and pertaining research data.

Research Subject

Born-digital sources in collections of the German Literature Archive include digital parts of authors' inheritances and literary works published on the WWW.

Tasks

- Model born digital material in authors' estates, net literature and literature on the web
- Case studies in Net Literature, Web Literature and born digital estates, informing research and user oriented development
- Develop and provide computational methods for analysis and management of digital objects
- Develop and provide interfaces to add sources, methods, tools and best practices
- Develop and realize a sustainable data management solution following the FAIR principles
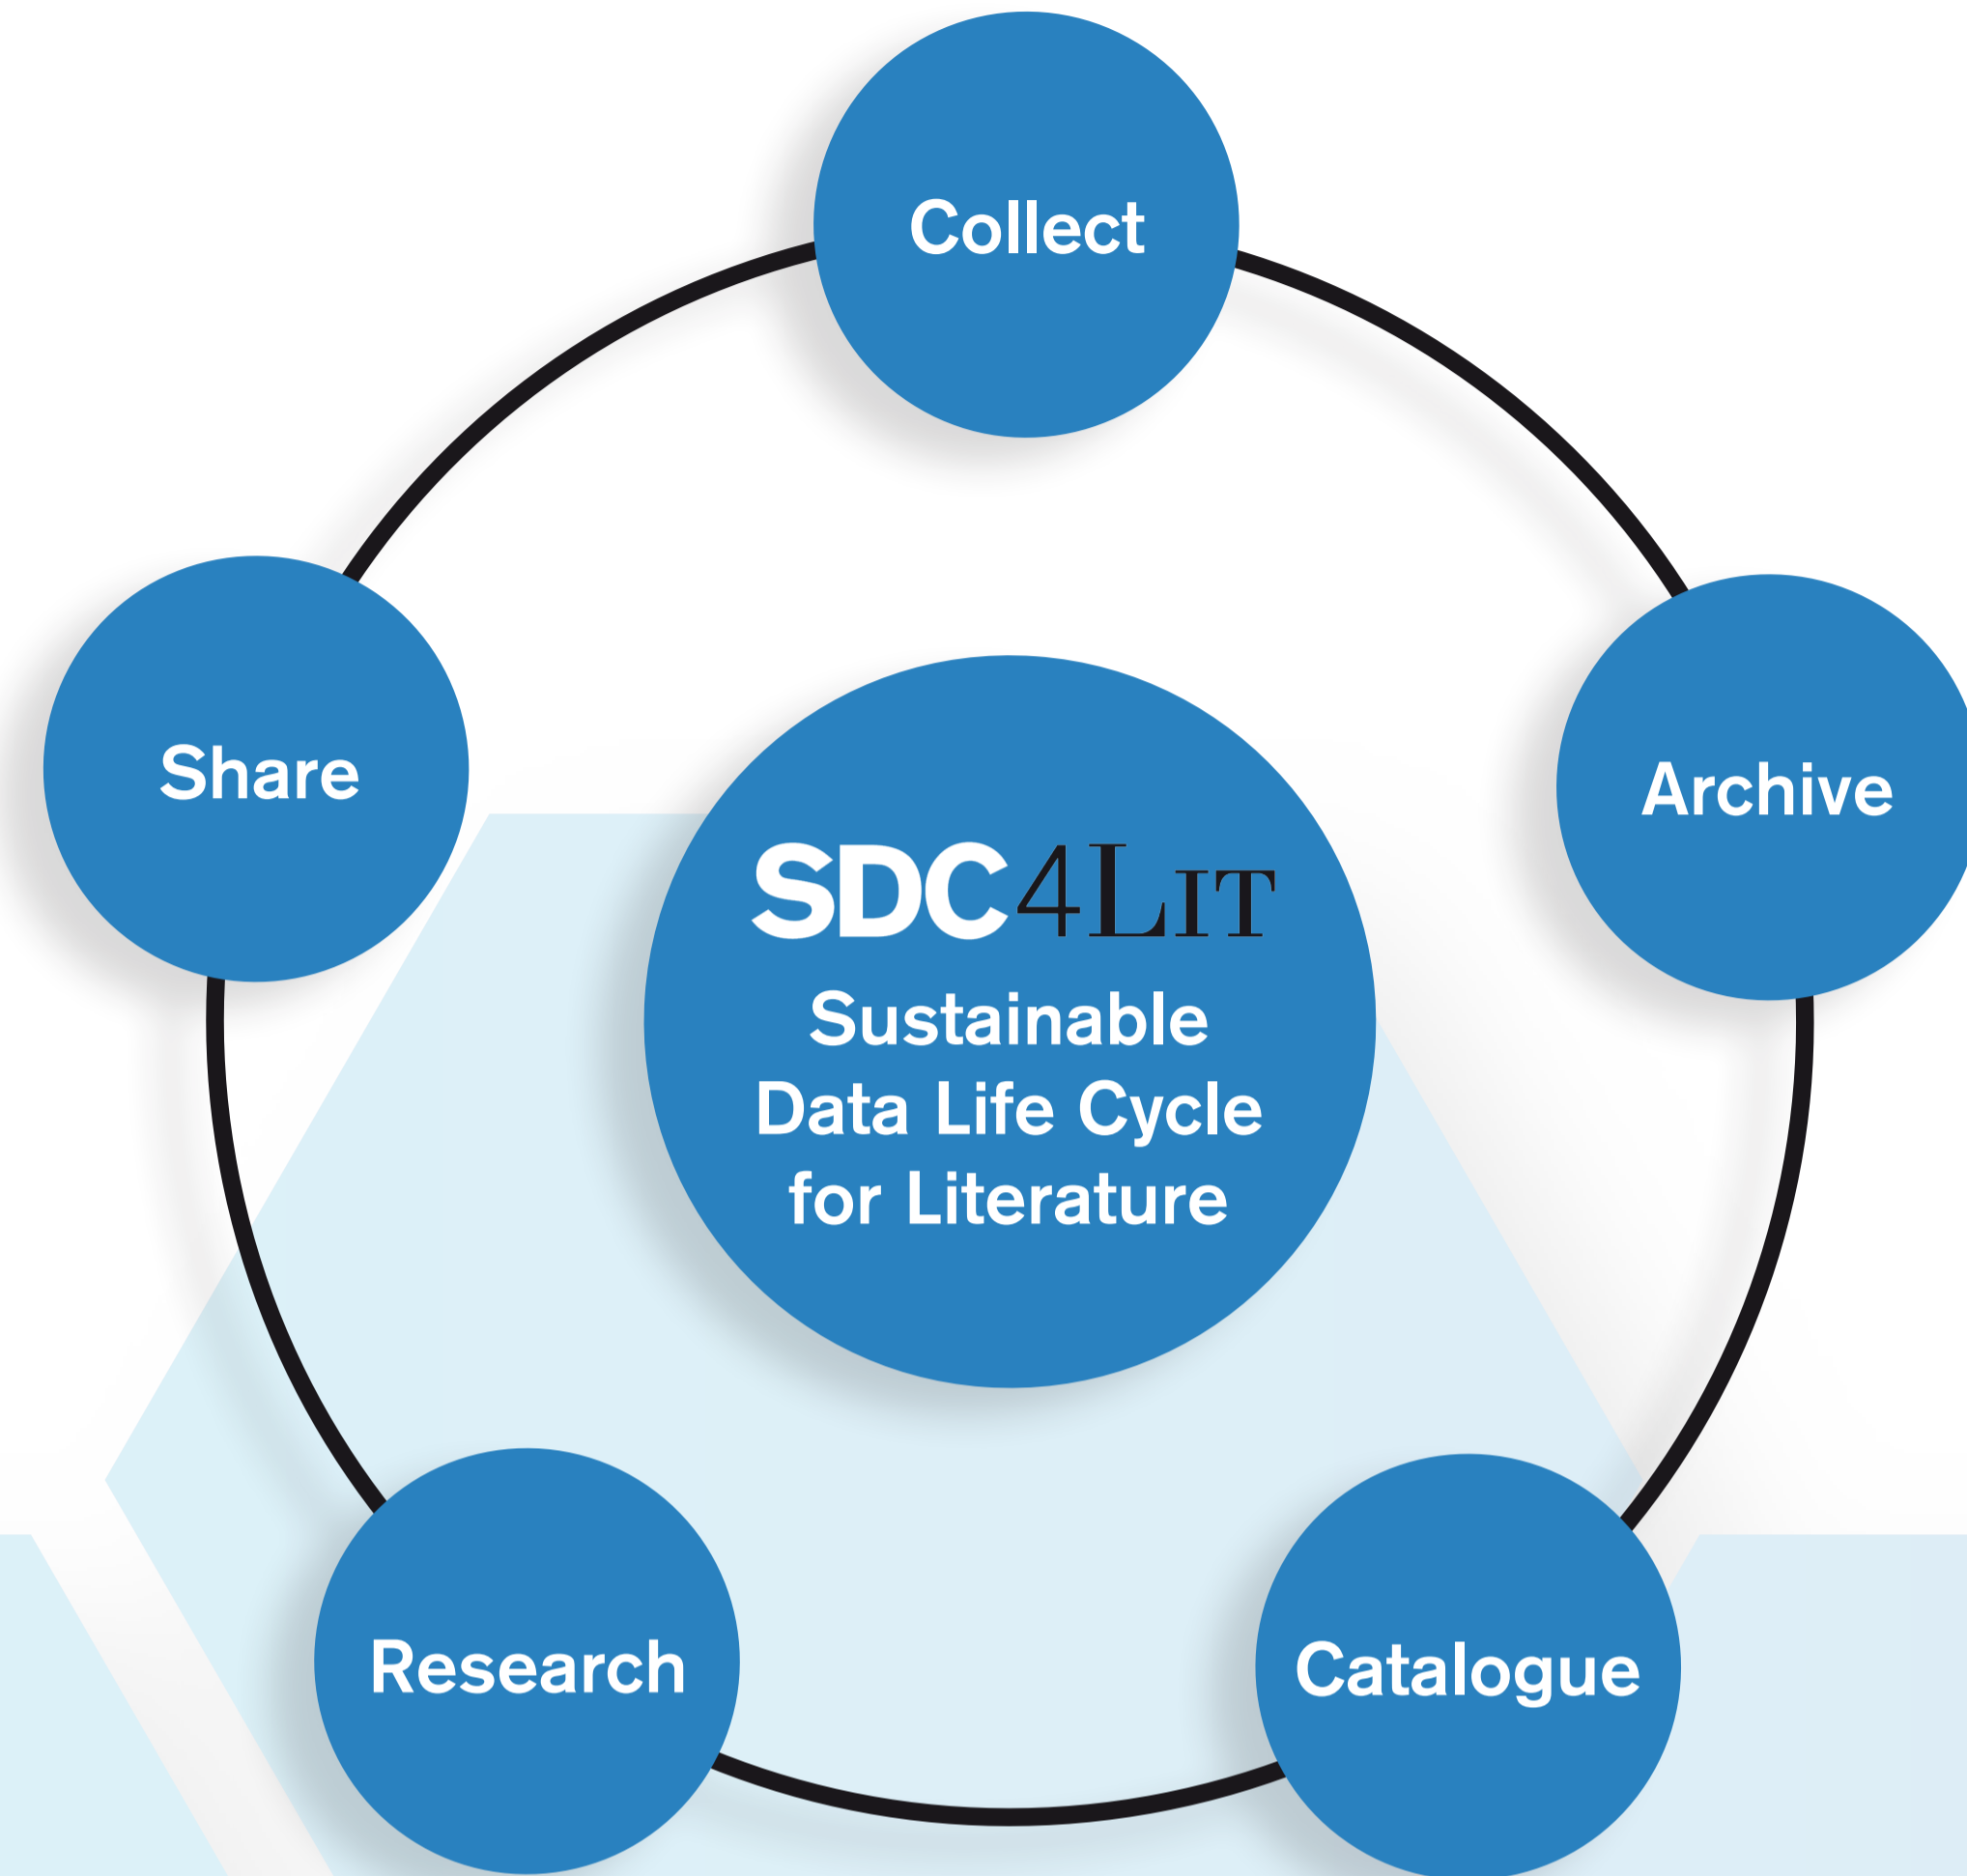

Team
